CONTAIN YOUR WASTEWATER SAVINGS!

Aquastore® tanks are used in a wide variety of wastewater treatment and storage applications—stormwater run-off, equalization and trickling filters, sludge digestion and sludge storing/mixing. Larger system uses include Sequential Batch Reactor (SBR), pack-

age treatment plants and anaerobic sludge digestion.

The preparation and coating of the Aquastore® sheet edges is something that sets us apart from our competitors. After initial sheet preparation, all full height vertical

The modular design of Aquastore® tanks and bolted lap joint construction allows them to be quickly erected, even in the most remote locations.

wall sheet edges and all rectangular shaped floor sheet edges are mechanically beveled. A thermal spray coating of stainless steel is applied. The process is called EDGECOAT.™

Aquastore® tanks feature an exclusive glass-fused-to-steel coating on interior and exterior surfaces. The silica glass coating is fused permanently to the steel panels in a 1500°F computer controlled furnace, in controlled environmental conditions (ISO 9001 Quality System Certified facilities.) The coating withstands corrosive liquids and vapors and offers excellent impact and abrasion resistance.

You can provide additional protection to your wastewater storage tanks with the new **Aquastore® Aluminum Geodesic Dome**. The domes are constructed of high-quality aluminum (6005 A-T6) for strength and durability. The aluminum panels resist corrosive vapors and contain odor. Domes are available for newly erected tanks and can also be retrofitted to existing field-welded and concrete tanks.

Aquastore® tanks do not require future sandblasting and repainting, which reduces maintenance costs. In fact, Aquastore® wastewater tanks have a **lower life cycle cost** than other tanks! Prove it for yourself. Download the new (more user friendly) Life Cycle Cost Estimator (LCCE) from www.aquastore.com or contact your local Authorized Aquastore® Dealer to discuss the LCCE.

Your independent, authorized Aquastore® dealer has full details on all Aquastore® tanks and product lines. Your dealer can provide assistance with sales, installation and complete customer service.
